

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Introduction

This document sets out the processes by means of which doctoral students in the Learning Design and Leadership program proceed through the six courses and four examinations of the exam-dissertation sequence. These elements track the design of a traditional, five-chapter thesis. We are also happy to support other thesis designs, however we believe that the five-chapter thesis provides a rigorous, conventionally recognizable introduction to scholarly research practices.

Six Course Exam-Dissertation Sequence

Each step involves milestones leading to the final dissertation

Rationale

This exam-dissertation sequence has been designed around the following principles:

1. The dissertation process is **iterative**, with six major deliverables following cycles of peer review and advisor review and four points of evaluation and feedback by examination committee.
2. There is an emphasis on **evolution of ideas**: at each iteration, as well as the new sections of the draft dissertation text, old sections are revised and a change note appended. The examiners remain the same through all four steps—three reviewers at the general and special field steps, increasing to four for the preliminary and final exams. This means that the examiners travel with the candidate as their work evolves. Candidates provide links to CGScholar in their Word documents, so examiners can review initial drafts, peer reviews, and self-reviews documenting changes based on peer feedback in each of the cycles of peer review.
3. The process is **collaborative**, modelling the canonical social processes of scholarly knowledge production (scholarly journals, monographs, and competitive research application).
4. The questions for **the general and special field exams** are the same for all candidates because we are taking this opportunity for them to draft initial text for the literature review chapter of their dissertation, whatever their topic may happen to be. We use the general and special field exams and their connected courses to create initial drafts of chapter 2 of the dissertation. Here, the candidate will demonstrate their capacity to select and synthesize the literature in their chosen domain either at a general level in terms the broad contours of the discipline (general field) and at a specific level in terms of the precise domain that they would like to address in their dissertation (special field).
5. The rubrics scaffold **metacognitive reflection** on scholarly practices in peer-reviews, self-reviews, and change notes. These also establish practices which explicitly acknowledge the social provenance of knowledge in the peer and examiner community, as well as being a mentor to others in intellectual work.
6. The source texts in CGScholar are **multimodal**, including inline video, datasets etc. These can be accessed via permalinks into the CGScholar version.

General Exam Question

Write a literature review that provides evidence that you have a command of the wider field of scholarly endeavor associated with the research question(s) you have chosen for your dissertation. A literature review sets the context for your dissertation demonstrating that you have discovered, presented and analyzed the value of the key sources that contain the theories, practices, data, methodologies and applications associated with your research question. (Be sure to refer directly to your research question in the review!)

What is the broad shape of the area in which you are working? What are its main challenges? What kinds of innovative ideas and transformational practices is the field begging, generally speaking? One rough measure of generality might be, if you were to create undergraduate college course introducing students to this general area of knowledge, what would you want them to know? What should they read to get a sense of the critical issues being addressed in theory, research and practice?

The literature review should not merely be descriptive—it should be analytical and critical. However, at the same time it should be a fair representation of the perspectives and voices of a range of people across the field. What are the main issues arising in this general field? The main challenges to be addressed. The questions being asked by the intellectual and practical leaders in the field? Absences or gaps in our knowledge? Work that needs to be done? Of course, you need to map the broad shape of the field to make your case, but the focus here should be your argument about work that needs to be done, which also justifies your dissertation focus.

However, having said this, in a literature review your voice is secondary. This should be a place where you let the field speak. You are there, of course, in the selection of texts and the framework you develop to present them—but subtly so.

Special Field Examination Question

Write a literature review, focusing in on theory and research related to the specific topic you have chosen for your dissertation. In contrast to the literature review you wrote for the general field examination, narrow your focus to research findings relevant to the particular area you will address in your dissertation. Here you demonstrate that you are an expert in the area of empirical research and/or theoretical work that directly relates to (what might become) the topic of your dissertation.

Be sure this section does not repeat the general field section. Revise the general field section as needed, submitting both together with a change note explaining any changes you have made in the light of the special field literature review.

Some issues to address: how the special field is located within the general field; challenges addressed by the special field: how these connect with the challenges of the general field; how the key concepts and theoretical frameworks of the general field are applied, extended or modified in the special field; how the methodologies of the general field have been applied in the special field; the main findings generated by these methodologies

Some questions to consider: What brings you to this special field? What are the main theoretical approaches in your special field? What are the most commonly used methodologies? What are the principal empirical findings? What answers does the literature provide (and fail to provide) to your research questions? Do these answers tend to confirm or deny your hypotheses? What are the practical needs for research and intervention in your special field? What potentials are there for extended application and innovation? What work needs to be done, in general, in particular in your dissertation?

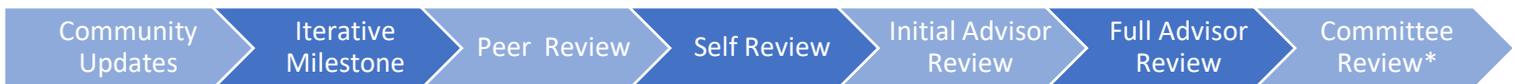

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Support: Faculty Advisor, Dissertation Advisor, and Peers

- Initial Individual Advising Session with Dissertation Advisor
- Weekly Group Advising Sessions; Advisors and peer discussions
- Individual Advising Sessions, as needed, with Dissertation Advisor or Faculty Advisor
- Peer mentoring and collaborative learning and reflective practices integrated into all processes
- Rubric for each milestone (see <https://ldlprogram.web.illinois.edu/dissertation/courses/rubrics>)
- Sequence tracker and regular asynchronous check-ins
- Target timelines

Iterative and Cumulative Contributions and Review Process

Repeated for each step and milestone in the sequence

Peer Learning Communities and Peer Review Process

**Circumstances may warrant an alternate reviewer*

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Six Course Exam-Dissertation Sequence Milestones

Iterative and Cumulative Contributions and Review Process

*Focus on one step at a time; one update at a time.
Each step in the sequence follows a similar process* →

Detailed Process

Seminar Elements

1. Submit the **Research Seminar Registration Request Form**
2. Add your registration plan to the Tracker
3. Respond to Admin Updates in the Community with the relevant prefix
4. Complete Projects for the current seminar
5. Present at least once per seminar course (ask questions, seek feedback, share your ideas, share your progress, etc.) – Sign up on the Google Tracker

Note: You may be assigned peer reviews for any type of work at any time

What to you while you wait for each review cycle

1. Begin working on the admin updates in the next step
2. Gather literature for the next step (*do not submit the next work until you receive feedback on the previous work*)
3. Complete a peer review for someone else
4. Prepare your prelim or final PPT slides

Work Creation and Review Process

1. Create your First milestone Draft work in CGScholar.
2. *Subsequent works will use the “duplicate” feature.*
3. Request to connect the work to the **LDL Doctoral Dissertation Sequence** Publisher. *Make sure that the work is long enough.*
4. EDS Team assigns peer reviews if the work is long enough.
5. Start seeing feedback after about a week as reviewers submit; target review deadline is within two weeks (*do not submit until all reviews are received*).
6. Revise and submit in CGScholar and complete a Self-Review indicating how you applied your peers’ feedback and how your work meets the minimum requirements
7. Submit a Word version with your CGScholar link at the top to Dr. Francis for preliminary review (filename should be your name, work, and short title) include CGScholar link; revise accordingly.
8. Submit a Word version to Dr. Kalantzis and copy Dr. Francis (*subject should be the [Work Type] ready for Mary’s review*); revise accordingly based on Dr. Kalantzis’ feedback
9. Mary will indicate if your work is ready for examination (general, special, preliminary, or final); See **Committee Feedback** column.

Committee Feedback

1. Fill out department form to request the **exam** (Forms are: qualifying, prelim, or final)
2. Receive notification from the department with exam question or scheduling confirmation within a few days
3. Submit work to Committee via the online form as a Word document with a link to CGScholar embedded at the top
4. Receive committee feedback within three to four weeks
5. Revise work based on committee feedback (even if not required to resubmit)
6. **Duplicate** the finalized version to create the start of the next work (About this Work – Versions – Select the “Duplicate” icon next to the version you want to copy); Rename the work and re-add the icon. *Do not create a new work and do not try to re-submit your previous work again, as a single work can’t be routed for peer review again.*

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Six Course Exam-Dissertation Sequence Milestones

Preparing your Research Proposal

General Field Research Seminar and Examination

1. Admin Updates with a prefix of 0 and 1
2. Add entries to the Shared Annotated Bibliography
3. Temporary Chapter 2 Part 1: General Field Literature Review
4. Examination

Forms

1. Online EdD EPOL Qualifying Exam Seminar Registration Form
2. Qualifying Exam Request Form (from our web site and not the Grad Forms page)

Special Field Research Seminar and Examination

1. Admin Updates with a prefix of 2
2. Add entries to the Shared Annotated Bibliography
3. Temporary Chapter 2 Part 2: Special Field Literature Review
4. Examination

Forms

1. Online EdD EPOL Qualifying Exam Seminar Registration Form
2. Qualifying Exam Request Form (from our web site and not the Grad Forms page)

Methodology Seminar

1. Admin Updates with a prefix of 3
2. Add entries to the Shared Annotated Bibliography
3. Chapter 3 Part 1: Theory
4. Chapter 3 Part 2: Methodology Design
5. IRB Documentation and Approval

Forms

1. Online EdD EPOL Qualifying Exam Seminar Request Form
2. IRB Protocol Form
3. IRB Research Team Form
4. Other IRB Forms as necessary

Research Proposal Seminar and Examination

1. Chapter 3 Part 3: Methodology Implementation and Appendices
2. Admin Updates with a Prefix of 4
3. Fully streamlined Chapter 2
4. Chapter 1: Introduction
5. Chapters 1 to 3 aligned with the Graduate College's approved format submitted to your committee for examination
6. Coordinate with the Dr. Francis to schedule your preliminary exam
7. Prepare a 15-minute oral presentation and submit slides for advisor review
8. 15-minute Oral Presentation Examination to your committee (60-minute session)

Refer to the **Preliminary Exam Outline document** for additional guidance

Forms note: you must be enrolled in the term you plan to present

1. Online EdD EPOL Prelim/591 Request Form
2. Request for Appointment of Thesis/Dissertation Committee Form

1. Complete assigned peer reviews

2. Present at least once per seminar course (ask questions, seek feedback, share your ideas, share your progress, etc.) – Sign up on the Google Tracker

Important: The form to register for a Seminar/Course is different than completing the form for an exam

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Six Course Exam-Dissertation Sequence Milestones

Implementing your Research Project and Preparing for your Final Dissertation

Collect Data

Once your committee has approved of your project and you have IRB approval, you may begin the data collection process

1. Admin Updates with prefix of 5
2. Following your approved IRB and methodology implementation plan, begin collecting data
3. Keep your data organized as you go
4. Keep a data collection log of what actually happens – how many did you invite, how many responded, etc.
5. Start writing the beginning of chapter 4 that includes your actual project implementation.
6. Finalize your appendices with your final data collection instruments, images of your IRB paperwork, etc.

Revise Chapters 1 to 3

While waiting for your data collection to conclude, you can work on a few items

1. Review and proofread chapters 1 through 3 in detail.
2. Revise to reflect past tense. “The present study focused on...” instead of “will focus on”
3. Adjust anything that may no longer be true, such as a piece of your methodology plan that you didn’t include
4. Fully proofread, including asking a friend, family member, or copy editor to proofread it
5. Format your work based on the thesis office requirements
6. Update your scholar version after your word version has been edited
7. Submit your cover sheet to the thesis office for approval.

Data Analysis

1. Conduct a pre-analysis with partial data.
2. Evaluate your analysis plan and the data collection instruments
3. Build your data analysis formulas so once you have the data, you can paste it in
4. Be thinking of how you’ll present your data once it is all collected
5. Map out your chapter 4 and 5 outline. Even if you don’t know your findings yet, what subsections do you anticipate including?

1. Complete assigned peer reviews

2. Present at least once per seminar course (ask questions, seek feedback, share your ideas, share your progress, etc.) – Sign up on the Google Tracker

Forms: note: choose any term between your prelim and final defense if your data collection and analysis will take more than one term.

1. Online EdD EPOL 599 Request Form
2. Leave of Absence if you need more than one semester to work on this step (you do not need an LOA during Summer)

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

Six Course Exam-Dissertation Sequence Milestones

Writing your Final Dissertation

Write Chapters 4 and 5

1. Admin Updates with prefix of 6
2. Write Chapter 4 and submit it for advisor review; make revisions
3. Write Chapter 5 and submit it for advisor review; make revisions
4. Submit final draft for advisor review
5. Once you receive preliminary advisor approval on your full dissertation, register for 599
6. Send Dr. Francis an approved copy of your final dissertation that will be shared with your committee

Prepare and Present your Oral Presentation

1. Coordinate with Dr. Francis to schedule your peer presentation and final defense exam
2. Prepare a 15-minute oral presentation and submit slides for advisor review
3. 15-minute Oral Presentation to your peers (30-minute session)
4. 15-minute Oral Presentation Examination to your committee (60-minute session)

Forms note: *you must be enrolled in the term you plan to defend*

1. [Online EdD EPOL 599 Request Form](#)
2. [Request for Appointment of Thesis/Dissertation Committee Form](#)

Submit your Final Thesis

1. Advisor Review
2. Peer Review for general edits
3. Committee Review prior to your final defense
4. Advisor Approval after your final defense and final revisions
5. Departmental Review and Approval
 - a. Online Students: Jena Pfoff
 - b. On-Campus Students: Linda Stimson
6. Thesis Office Review and Approval

*Refer to the **Final Exam Outline** document for additional guidance*

1. Complete assigned peer reviews
2. Present at least once per seminar course (ask questions, seek feedback, share your ideas, share your progress, etc.) – Sign up on the Google Tracker

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

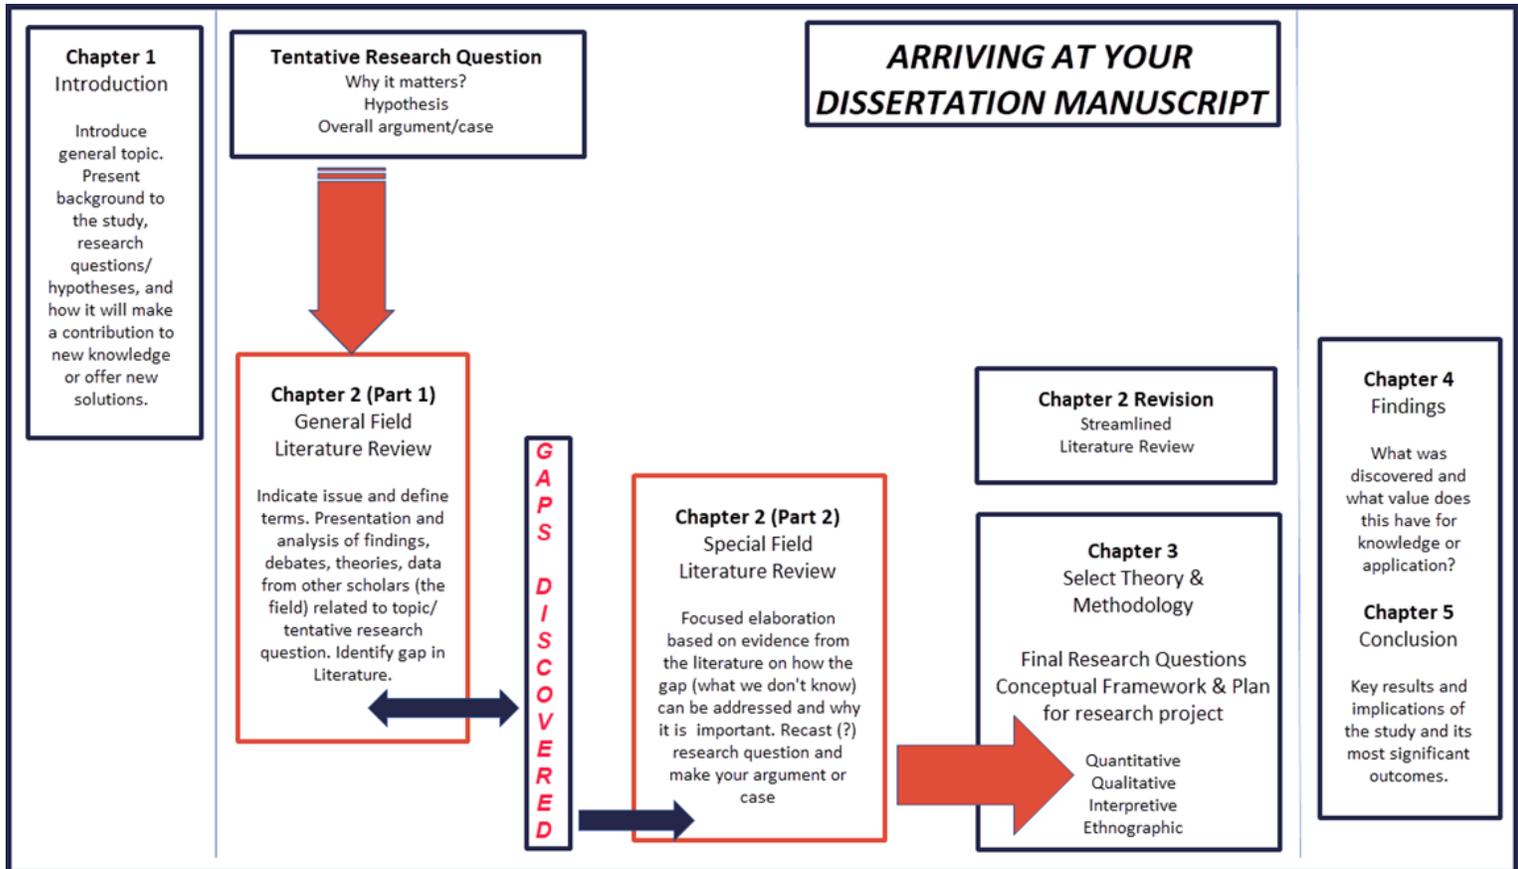

Key Milestones Leading to Your Final Dissertation

Each step includes one or more milestones

Final Dissertation Structure

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

5-Chapter Dissertation Model – by Methodology

Across the three main kinds of methodology, this is how the five-chapter dissertation plays out

Dissertation Type	Qualitative Methods	Quantitative Methods	Interpretive Methods
Chapter 1: Introduction - Background - Motivation and Purpose of the Study - Problem Statement, Significance and Research Questions - Brief chapter overview	<i>Qualitative aspects:</i> - Why you have chosen qualitative methods - Brief summary in the chapter overview of how you will implement these methods <i>Interpretive aspects:</i> - Why these questions are worth answering - How the answers will likely be relevant - Reasons for your selection of qualitative methods	<i>Quantitative aspects:</i> - Why you have chosen quantitative methods - Brief summary in the chapter overview of how you will implement these methods <i>Interpretive aspects:</i> - Why these questions are worth answering - How the answers will likely be relevant - Reasons for your selection of quantitative methods	<i>Interpretive aspects:</i> - What you wish to interpret, why it needs fresh re-interpretation - Why you have chosen interpretive methods - Brief summary in the chapter overview of how you will implement these methods
Chapter 2: Literature Review - General Field Overview (with subheads for general themes in this area of the discipline) - Key dilemmas and enduring challenges in the general field - Special Field (with subheads for particular themes in the narrower area of your thesis topic) - Gaps in the literature in the special field	<i>Qualitative aspects:</i> - Methodological alternatives and tendencies in this area of the discipline - Empirical studies, qualitative compared to quantitative in the special field <i>Interpretive aspects:</i> - The interpretive frame of reference of general field within the discipline - Empirical results and their interpretation in the special field	<i>Quantitative aspects:</i> - Methodological alternatives and tendencies in this area of the discipline - Empirical studies, qualitative compared to quantitative in the special field <i>Interpretive aspects:</i> - The interpretive frame of reference of general field within the discipline - Empirical results and their interpretation in the special field	<i>Interpretive aspects:</i> - The general field: its interpretive frame of reference - The special field: the interpretations now applied and why they need to be revisited <i>Other Methods:</i> Are the general or special field also addressed qualitative or quantitative methods? How can these results support your interpretive endeavor?
Chapter 3: Theory and Methods - Definitions of Concepts - Theoretical Model - Methods Approach: Justification and Limitations - Research Planning: sample, recruitment - Research Ethics (described here, documents in appendix) - Research Instruments (described here, documents in the appendix) - Data analysis processes	<i>Qualitative aspects:</i> - Why you have selected a particular qualitative approach - Your hypotheses: what you expect to discover - Your implementation plan <i>Interpretive aspects:</i> - Key concepts and explanatory framework - The epistemological presuppositions behind the qualitative methods you intend to use, and your plan to apply these methods	<i>Quantitative aspects:</i> - Why you have selected a particular quantitative approach - Your hypotheses: what you expect to discover - Your implementation plan <i>Interpretive aspects:</i> - Key concepts and explanatory framework - The epistemological presuppositions behind the quantitative methods you intend to use, and your plan to apply these methods	<i>Interpretive aspects:</i> - Key concepts and explanatory framework - The epistemological presuppositions behind the interpretive methods you intend to use (e.g. philosophy, semiotics, cultural theory), and your plan to apply these methods - Your plan of action for tackling this interpretive project
Chapter 4: Findings - Divide findings into sections and subsections with thematic headings and subheadings	<i>Qualitative aspects:</i> - Quotes, paraphrases, images, videos <i>Interpretive aspects:</i> -- Empirical narrative: qualitative data systematically organized around your interpretive frame	<i>Quantitative aspects:</i> - datasets, data visualizations <i>Interpretive aspects:</i> - Empirical narrative: quantitative data systematically organized around your interpretive frame	<i>Interpretive aspects:</i> Theoretical narrative: systematically laying out your revised interpretation
Chapter 5: Conclusions - Reflection on the Intellectual Journey - Summary of Findings - Implications: Recommendations for Action and Future Research	<i>Interpretive aspects:</i> What does this all mean (concluding interpretations)? Where do we go next (more qualitative empirical work)?	<i>Interpretive aspects:</i> What does this all mean (concluding interpretations)? Where do we go next (more quantitative empirical work)?	<i>Interpretive aspects:</i> What does this all mean (concluding interpretations)? Where do we go next (more interpretive work)?

Learning Design and Leadership Exam-Dissertation Sequence: An Iterative Approach Leading to your Final Dissertation

5-Chapter Dissertation Model

Chapter 1. Introduction. Outlines what the thesis is about – it includes the background to the study, research questions, and how it will make a contribution to new knowledge or offer new solutions.

Chapter 2. Literature Review. This chapter consists of two parts, addressing the literature from the perspectives of the general and special field. The general field literature review is a summary and analysis of key literature that is relevant to the research question/hypothesis. Its focus is the general framework within which scholars have addressed these questions. It also reveals and discusses any gaps in the literature. The special field literature review then addresses the gaps revealed by the general field literature review and any finely focused research and thinking that may be relevant to the study's research project. This chapter also includes an explanation about how the research project addresses an important gap in the scholarly literature or an important area of practical need.

Chapter 3. Theory and Methods. The first part of this chapter offers definitions of the key concepts, and the explanatory framework that connects these concepts for the area that the research project is exploring or testing. Connecting theory to methods are your hypotheses, or anticipated possible answers to your research questions, answers for which your methods will provide evidence. The second part of this chapter outlines and justifies your method (or methods). This will include an analysis of the underlying epistemology—how well these intensively focused knowledge processes render empirical data or explanations deeper and broader than knowledge casually acquired in everyday experience of the lifeworld? And as every methodology has its critics, what are the main critiques of this approach? What are the limitations of these methods? The chapter concludes by describing the techniques and instruments used to collect and analyze data, referring to the instruments themselves (in the appendices), and an implementation plan. (This presentation will be in the future tense for the preliminary examination, then revised into the past tense for the final examination.)

Chapter 4. Findings. Present the results of dissertation study/research project – what was discovered and what value does this have for knowledge or application?

Chapter 5. Conclusions. Discusses key results and implications of the study and its most significant outcomes. Presents models of action and recommends research agendas for the future.
